

09 Oatmeal Tweed Floppy-Ear Hood

PetsCrochet | Photo-matched, adjustable prototype guide | US crochet terms

Important use note
This is a brief, supervised photo accessory. It is not a tested safety product and must not restrict sight, hearing, breathing or movement.

Visual direction	The tweed texture is attractive, but this reference needs a shorter front edge and clearer eye and ear clearance before it can represent a safe finished sample.
Stitch direction	Half-double crochet rows, elongated side opening chains, compact single-crochet face edge.
Why it works	The idea is still worth keeping because floppy ears need a different opening strategy from upright ears. The safer version uses shorter side channels, a clear face opening and a lighter fabric.
Variation	For a simpler and safer version, remove the side drapes entirely and make a shallow crown with two wide ear slots.

Head and Ear-Spacing Worksheet

Measure	How to measure	Your number
H - head circumference	Around the head above the eyes and behind the ears.	_____ cm
E - ear center spacing	Center of one ear to center of the other.	_____ cm
O - opening width	Widest part of the ear plus only comfortable clearance.	_____ cm
D - front depth	Crown center to the edge that stays above the eyes.	_____ cm
s / r - gauge	Stitches and rows measured across a 10 cm swatch.	___ s / ___ r

Useful calculations: target crown diameter is approximately $H / 3.14$. Opening stitches are approximately $O \times s / 10$. Ear spacing stitches are approximately $E \times s / 10$. Round the numbers only after checking the placement on the real pet.

Materials

- Lightweight washable oatmeal tweed-effect yarn with short integrated flecks
- 3.5 mm hook as a starting point
- Yarn needle, soft tape, stitch marker and scissors

Pattern note: High-priority correction. The PDF describes the corrected version, not the obstructive drape visible in the supplied photograph.

Construction

Oatmeal Tweed Floppy-Ear Hood | Work from your measured worksheet, not the photograph.

Step-by-step method

- 1 Measure the pet's head circumference (H), ear center spacing (E), widest ear width (O) and desired front depth (D). Record the actual numbers on the worksheet before choosing a size.
- 2 Make a 10 cm swatch in the main stitch. Record stitches per 10 cm (s) and rows per 10 cm (r). Use the swatch to calculate stitch counts instead of copying a generic breed size.
- 3 For a round crown, calculate the target crown diameter as $H / 3.14$. Begin with 6 single crochet in a magic ring and increase evenly until the crown reaches the measured diameter and sits above the eyes.
- 4 Work the body in the listed stitch until the hat reaches the ear line. Mark the center of each ear position using E and the opening width O. Keep the marks level on both sides.
- 5 At the opening round, work to the first marker, chain the number of stitches needed for O, skip the same number of stitches, continue to the second marker and repeat. On the next round, work into each chain space and reinforce both edges with compact single crochet.
- 6 Continue the body to the measured front depth D. Stop before the eye line. Add the listed edging or brim only after checking that the plain hat already fits comfortably.
- 7 Fasten off and weave every tail through several dense stitches. Stretch the fabric gently, inspect the openings and test the finished piece for loose loops before placing it on the pet.

Design-specific finish

Make a shallow hood in dense half-double crochet, then create two elongated side openings that let the ears fall naturally. Shorten the front edge so both eyes remain fully visible and finish the side panels above the throat.

Variation: For a simpler and safer version, remove the side drapes entirely and make a shallow crown with two wide ear slots.

Final Fit and Finish Check

- [] Both ears move naturally through the openings without compression.
- [] The front edge stays above the eyes during a normal head turn and downward look.
- [] The nose, mouth, whiskers, throat and breathing path are completely clear.
- [] All tails are woven in, the fabric has no loose loops and the edge cannot catch a claw.
- [] The pet remains relaxed. Remove the item at the first stress cue.
- [] The physical sample is washed, dried and checked again before reuse.

Design-specific safety note: Do not publish this reference as a final fit example unless the front edge is raised and the side panels are shortened on a physical sample.

Before You Publish

Photographs can show a beautiful direction, but they cannot prove the stitch count, yarn content or fit. Crochet the sample, record the real yarn and gauge, wash it, and fit-check it on the intended pet before calling this design tested. Until then, keep the wording prototype-ready and inspiration-focused.

This guide is an original PetsCrochet photo-matched draft. It is not a veterinary, behavior or safety substitute.
